NEW FEATURES

Color of Paper Stock Displayed

You will be able to display the color of the paper stock. The color set up menu is located in the Materials, Inventory and Equipment menu. You will need to enter the RGB levels for each color you want displayed. Keep in mind that the color displayed to the customer will be affected by their video settings. This may cause confusion resulting in question to your office.

Added the Newsletter Templates to the Template Builder

You will be able to handle templates for Newsletter similar to business cards, stationary and letterhead. The template is set up for one page.

Able To Print Banner Page

This feature will enable you to print a banner page with each print order. Currently, the banner page will print with every page. Our next modification will enable you to limit the banner page to print per order. A Banner template must be created with the name *JobTicketTemplate.pdf* and saved in the EDU\SPART folder. The distributed default *JobTicketTemplate.pdf* may be used as is or may be tailored to have a different look. The *JobTicketTemplate.pdf* must have the following fields defined:

txtJobNum	txtJobTitle
txtOrderID	txtBudgetCode

FEATURE MODIFICATIONS

Improved Copier/Press selection for Color Print Orders

The system will use the resource configured in the Paper Use Restrictions to provide an accurate quote for Copier/Press charges. If you do not have a Press with Plates selected in the Color section the system will not ask the user any question with regard to color. If you do, the user will be asked how many colors to be printed on the paper stock selected. The system default for colors is "1" since Black is a color.

Maximum Order and Annual Amount Notification

The system will notify the user if the order requested exceeds the amount allowed. The amount allowed is set in the Account Number Menu.

.pdf Conversion to Parallel In Background During Order Process

The conversion of the file to .pdf will be conducted transparent to the customer. They will no longer see a bar across the screen during the conversion process. The file will be displayed at the end of the order for their review.

Template Builder Modification

You will be able to set the field size limits for your templates. This will enable you to set the limits for the user to mirror the settings you established when creating the .pdf template in Acrobat.

Able To Turn On/Off Setting For Adding Account Codes

You will be able to set the feature to add an account code from System Settings.

User Administration Modifications

The ADMIN user level will only be able to see the Account codes that they have authorization to view. They will need to be authorized to view these codes by the DEV user level.
